

# PRESS RELEASE

## THE BRS1212 FROM GEEPLUS, SMALL, BUT NOT DELICATE

*October 2016.* Small enough to fit inside the barrel of a standard Euro lock, the BRS1212 solenoid from Geeplus is not susceptible to force, making it ideal for security applications.

In battery operated situations, the BRS1212 excels due to its low power requirements for opening and being brushless, unlike small electric motors, the device is highly reliable.

In situations where even smaller components are required, Geeplus are able to supply solenoids as small as 5mm for volume applications.
