NEW PRODUCTS FROM GEEPLUS SEEN FOR THE FIRST TIME AT COMPAMED.

VISIT US ON STAND 8aD14

Geeplus have added a number of new products, and a new catalogue to be shown for the first time for this year's Compamed.

Peristaltic pumps in a range of sizes, new and powerful bistable rotary solenoids, brushless dc motors, testing equipment and new voice coil motors will be just a part of the stand where visitors will be able to view a number of the components in action.

Included in the display will be a tiny open frame permanent magnet solenoid which only measures 12x8x7mm at its widest points yet provides more than 2N of holding force. Visitors to the stand can also see a new range of proportional solenoids use a return spring in order to create a positioning device where the position is governed by the amount of input current to the coil. The device offers a force up to 80N, high operational life and a very robust design.
