

PRESS RELEASE

GEEPLUS OFFER INCREASED OPERATIONAL LIFE IN THEIR NEW CLUTCHES

For situations requiring much longer life and reliability than that achieved by their standard range of clutches, Geeplus have responded to customer requests for clutches which have an abnormally long operational lifespan.

The result is a range of re-engineered clutches benefiting from re-designed and specially finished internal parts which enable them to operate for a lifetime which has been increased tenfold in some instances.

Available in the same sizes and mechanical packages as their standard range, the long life versions are interchangeable with standard parts for fast replacement or modification.
