

## NEW MAGNETISING FACILITY

*August 2015:* Geeplus has installed a new magnetising facility in their manufacturing base.

By being able to perform their own magnetising of coils, Geeplus can maintain greater control over the precise levels of magnetisation, thereby giving them greater flexibility over production and the added benefit of factory floor quality control.

From pre-production samples to full production runs, this new facility frees Geeplus from any external delivery delays and ensures that customers can access immediate solutions to any unforeseen stock availability problems they may have.
