

PRESS RELEASE

NEW MINI LEAD SCREW ASSEMBLIES FROM GEEPLUS

Manufactured for volume applications in focussing, lens or mirror positioning, the new Geeplus miniature stepper motors with tiny lead screw assemblies are available with motor sizes down to 6mm.

By using some standard motor components, Geeplus are able to reduce tooling costs and keep the cost of the finished assembly at a realistic level but the customer still has the opportunity to specify lead screw parts and cable connections.

Power to the assembly is provided by a bipolar drive with a supply voltage of 2V or more.
