NEW GEEPLUS PRODUCT CATALOGUE IS DESIGNED FOR ENGINEERS

Written by engineers for engineers, the latest product catalogue from Geeplus now contains more information than ever on the company's growing product range and their applications.

More than 200 A4 pages of detailed specifications which include drawings, performance graphs and application notes are crammed between the covers to provide a comprehensive guide to the actuators, voice coil motors, solenoids, electro-magnets, control circuits and vibration actuators available from Geeplus.

Available in both hard and soft cover versions, the catalogue gives advice on the selection of the product to suit the application in addition to comprehensive computer generated illustrations of actual test situations using specific products.
