GEEPLUS SURFACE MEASUREMENT EQUIPMENT ENSURES ACCURACY

Aware of how the smallest of imperfections can affect the properties and efficiency of a component, Geeplus have installed a highly sophisticated software controlled measuring process as part of their manufacturing facility to ensure that such situations do not occur.

Using both MeasureLink and exceptionally sensitive surface measurement equipment, Geeplus can measure, to microns, the roundness, smoothness and dimensions of their components in order to provide customers with a product which meets the most demanding of specifications. This is done with special regard to the accuracy of their manufacturing processes, providing peace of mind that Geeplus components have to pass the most rigorous and detailed tests before delivery.
