

PRESS RELEASE

SEE US AT COMPAMED IN NOVEMBER - STAND 8A-D14

Following last year's successful return to Compamed, Geeplus will be in Dusseldorf again in November (Stand 8aD14) with a number of new products designed specifically for applications in medical equipment. Their new VIBRO1, shown for the first time last year, has undergone changes to improve the sensitive control of linear vibration in delicate laboratory mixing or separating applications. Due to manufacturing advances, it is now scaleable, making it suited to smaller or larger applications.

Also on show will be our new VM30 voice coil motor with the advanced bearing race which has extended the life of this component to more than 100 million cycles - an essential feature where a high degree of reliability is concerned.

Solenoids, clutches and control circuits designed for use in medical equipment, including ventilators and liquid or gas pumps, will be on show along with other electro-mechanical products, some with specially designed software, in practical demonstrations.
